

OFFICER DECISION
DIRECTOR OF TRANSPORT AND REGULATORY SERVICES
23 JUNE 2023

**CONSIDERATION OF THE RESPONSES RECEIVED TO THE STATUTORY
TRAFFIC ORDER CONSULTATIONS TO INTRODUCE RENTAL E-BIKE BAYS IN
DALGARNO WARD.**

1 EXECUTIVE SUMMARY

- 1.1 The number of trips made by rental e-bikes has increased greatly in RBKC over the last few years. However, the parking of rental e-bikes on narrow footways can cause a nuisance, particularly where the footway is obstructed for those using wheelchairs or buggies. In June 2023, the Council made a Key Decision to implement rental e-bike parking bays, and enter into a Memorandum of Understanding with operators to ensure that all rental e-bikes be parked in marked bays.
- 1.2 To assist rental e-bike operators in restricting their customers to the proposed parking bays, the Council needs to ensure they are reasonably well distributed so that a user never has to walk too far to pick up or drop off an e-bike. The Council has therefore consulted on creating 164 designated rental e-bike parking bays to help control where dockless bicycles can be parked.
- 1.3 This report sets out the consultation responses received to the proposals in Dalgarno ward, with a recommendation on how to proceed for each proposal.

2 RECOMMENDATIONS

- 2.1 Following consideration of all comments received, officers recommend that the Director of Transport and Regulatory Services proceed as set out in Table 1.

3 BACKGROUND

- 3.1 The parking of rental e-bikes on narrow footways can cause a nuisance, particularly where the footway is obstructed for those using wheelchairs or buggies. To address this, the Council has proposed to create dedicated parking bays for use by e-bike hire operators and their customers in existing parking bays across the borough. This will allow the Council to bring more control over where bikes are parked and reduce the impact on pedestrians

4 CONSULTATION RESPONSES

- 4.1 From 5 April to 17 May 2023, the Council undertook consultation on introducing rental e-bike parking bays at eight locations in Dalgarno ward. Residents living near the proposals received letters signposting them to the consultation and the consultation was available on the Council's online consultation and engagement hub. Local ward councillors, residents' associations and community groups were made aware of the consultations by email.

- 4.2 In total, 54 responses were received. Table 1 summarises the responses received and the recommendation on how to proceed. Whilst officers did not agree with the objections in respect of two of the three sites with objections, we have received a request for a personalised disabled bay at the proposed location for St Mark's Road and are recommending not to proceed with an e-bike bay here. For those proposals that officers are recommending should proceed, section 5 provides officer responses to the issues raised.

Table 1 – Summary of responses received.

Scheme	No. Objections	No. Support in Part	No. Support in Full	No opinion	Comment	Recommendation
Barlby Road	0	1	6	0	0	Proceed
Bracewell Road	0	1	5	0	0	Proceed
Dalgarno Gardens	0	1	6	0	0	Proceed
Pangbourne Avenue	2	1	5	0	0	Proceed
St Charles Square	0	1	5	0	0	Proceed
St Mark's Road	1	1	5	0	0	Do not proceed
Sutton Way (G)	0	1	5	0	0	Proceed
Sutton Way (H)	1	1	5	0	0	Proceed

5 CONSIDERATION OF OBJECTIONS

- 5.1 Appendix 1 – 8 lists the responses received to each location in full. Table 2 below illustrates the main themes of the objections or 'support in-part' responses received.

Table 2 – Objections/support in-part responses by theme

Scheme	Loss of parking space	E-bikes left on footways	Impacts accessibility	Poor behaviour by cyclists	Other
Balby Road	0	0	0	0	1
Bracewell Road	0	0	0	0	1
Dalgarno Gardens	0	0	0	0	1

Pangbourne Avenue	2	1	0	1	1
St Charles Square	0	0	0	0	1
St Mark's Road	1	0	1	0	4
Sutton Way	0	0	0	0	1
Sutton Way (H)	0	0	1	0	3
TOTAL	3	1	2	1	13

5.2 Officer responses to the issues raised are detailed below:

Loss of parking space

5.3 Some respondents objected due to the loss of car parking space required to accommodate an e-bike parking bay.

Officer Response

5.4 The proposal has arisen following requests from residents to combat the nuisance and hazard dockless rental e-bikes can cause, particularly for people who have impaired vision or are using wheelchairs or buggies. Boroughs that have introduced on-footway e-bike parking bays have found that they need to be at least the size of a car in order to accommodate the number of bikes that are in circulation (ten dockless e-bikes require a space similar to one car parking space). Most footways in the borough are either not wide enough to accommodate a bay this size or (due to other footway furniture such as cycle parking stands, Santander cycle docks, seating, planting, etc) or, where they are wide enough, do not have a sufficient clear space. Consequently, most bays will need to be on the carriageway. The borough's parking restrictions have evolved to the degree that where e-bike parking would be safe and not risk causing an obstruction will only be where cars can currently be parked in marked bays. This reduction in car parking is thus a necessary outcome if residents want the Council to control where dockless e-bikes can be parked. There are just over 29,000 residents' parking spaces in the borough – far more than available pay-by-phone bays - so the 164 originally proposed bay conversions to dockless e-bike bays represents around 0.5 per cent. In comparison, residents' permit numbers are around 4 per cent lower now than pre-COVID.

Rental e-bikes left on footways

3.5 Some respondents objected to the proposals on the basis that e-bikes are a nuisance and often left on footways.

Officer Response

3.6 The main objective of the e-bike bays is to address this problem of rental bikes being left in inconvenient positions on footways. The proposals are intended to provide designated parking spaces for rental e-bike customers and once implemented, the operators will be guiding customers to these bays, with warnings and fines in place for non-compliance.

Poor behaviour by cyclists

- 3.7 One respondent objected to the proposal in Pangbourne Avenue on the basis that cyclists exhibit poor behaviour such as riding on the footway and do not abide by the highway rules and regulations.

Officer Response

- 3.8 Whilst a small minority of people who cycle may exhibit poor cycling behaviour, this is not a reason to refuse to install rental e-bike parking, in the same way the Council would not refuse to provide car parking because a small minority of people who drive contravene traffic rules.

Other comments

- 3.9 Table 3 lists comments received sitting outside of the above themes, alongside officer responses.

Table 3 – ‘Other’ comments and officer responses.

	Comment	Officer Response
1	It would increase existing antisocial behaviour, noise nuisance and litter by inebriated and/or young people who use public bicycles as a popular method of travel/transport. (St Mark’s Road proposal)	There is no reason to believe that the presence of rental e-bike bays, would lead to an increase in anti-social behaviour such as littering or excess noise. However, officers can monitor any reports of the above and take action accordingly following installation.
2	It will negatively affect the value and attractiveness to buyers of property on the road. (St Mark’s Road proposal)	There is no reason to think that the presence of rental e-bike bays devalue properties. Depending on how they prefer to travel, some potential buyers may value access to rental e-bikes as highly as car parking or being in close proximity to public transport.
3	There are alternative areas away from residents to place an e-Bike Rental Parking Bay. (St Mark’s Road proposal)	To ensure high compliance with parking of e-bikes in designated bays, officers aim to have an evenly distributed network of parking bays. The proposed St Mark’s Road bay would provide sustainable travel options for visitors to St Charles’s Hospital and Kensington Memorial Park.
4	It would cause a safety hazard to e-cyclists and other road users close to a busy but diminutive roundabout used by a regular bus service which uses the entire diameter of the rotary to turn into and out of the northern extreme	As the proposed bay utilises the space of an existing car parking bay, there is no reason to think that bicycles parked here would impact or be a hazard to road users any more than a car parked here presently.

	of St. Mark's Road. (St Mark's Road proposal)	
5	Too many in the north of the ward. Why aren't they spread out? (Sutton Way H proposal)	The Council has completed its consultation on eight parking bays that are evenly distributed throughout the Dalgarno Ward.
6	This one by the park will be an eyesore and dangerous for the young and old who use the park. (Sutton Way H proposal)	By creating an e-bike parking bay in the carriageway, we will minimise the number of bikes obstructing the footway, allowing ample space for elderly and children to access the park. The Council must often balance the needs of residents with the visual impact on-street. To a large degree, visual appearance is a matter of subjective taste. For example, some people may prefer the look of a row of bicycles over a parked car.
7	Scheme should be trialled in a couple of areas to see whether it works. [All proposals]	Since June 2021, the Council has been part of the London rental e-scooter trial which uses designated parking bays as the only places e-scooters can be parked. Officers have observed high compliance with parking of these vehicles and therefore believe that a similar approach can be adopted for rental e-bike parking bays, without the need for a further trial.

Appendix 1: Responses received for proposed e-bike Bay in Barlby Road

Support in Part One

These comments apply to all the parking bays being converted to e-bike parking spaces.

How will the new e-bike bays stop people leaving bikes anywhere on the pavement as they do now? What penalty will there be for people who continue to leave them on the pavement and how will it be levied? Shouldn't the hire companies be made responsible to go round and collect the bikes, as they know where they are?

People may use the e-bikes for short journeys, I can't imagine people giving up their cars to use e-bikes. The loss of so many parking spaces will put even more strain on those that remain. People pay for their Residents' Permits and, already, more permits are sold than there are available spaces, so this proposal is not fair to them.

In summary, those who leave their bikes where they get off them won't change their habits. Residents will be forced to struggle even more for parking, and the Council will continue to collect revenue from permits and fines from people who feel forced to park in empty or under-used e-bike bays.

Rather than apply this scheme wholesale and risk a potentially expensive disaster, please trial it in a couple of areas first to see whether it actually works.

Support in Full One (Better Streets for Kensington and Chelsea)

I am submitting this consultation response on behalf of Better Streets for Kensington and Chelsea (BS4KC), an organisation made up of RBKC residents also representing the views of people studying or working in the borough.

This response covers all the proposed locations for rental bike bays.

BS4KC welcomes and fully supports the proposals brought by RBKC to introduce dockless cycle hire bays in the carriageway across the borough. Dockless cycle hire bikes are providing convenient and sustainable travel options for many RBKC residents as well as those studying, working or visiting the borough. Their popularity is very much evident when walking down any street in the borough and these proposals rightly address some of the unintended consequences of dockless hire bike schemes. As such the proposals fully align with the RBKC plan of being a greener, safer and fairer borough;

1. Supporting and enabling greater use of dockless hire bikes as replacement for short car journeys is sustainable, improves local air quality and supports improving health and wellbeing
2. Providing dedicated parking bays off the pavement improves the safety for pedestrians and for those hiring bikes as they will have designated spaces
3. In a borough where the majority of households do not have access to a motor vehicle, meeting the needs of those wishing to not travel by car and repurposing some kerb space dominated by parked cars is fairer and goes towards meeting the needs of more RBKC residents and visitors

With the introduction of any new service there is a need to provide suitable infrastructure. It is recognised that dockless cycle hire bikes have in most places no designated parking provision therefore users usually leave them where their ride ends. Some make efforts to park the bike without causing obstruction however in most cases users do park the bikes on pavements (as do the hire companies in some cases). This invariably causes obstruction to pedestrians and impacts most on those who have mobility issues. On busy streets it causes pedestrian congestion with so much space taken up by cycle hire bikes (and other pavement clutter). Increasingly hire bike users are attempting to not cause obstructions on the pavement however there is no designated infrastructure for them so even the most well meaning users who leave the bikes between parked cars or in the carriageway also end up causing unintended inconveniences and risks. Designated cycle hire bays would address the vast majority of current issues associated with dockless hire bike schemes.

The proposals to create designated cycle hire bays on the carriageway are wholly appropriate to meet the needs of those wanting to make use of sustainable and healthy travel choices while managing the impact this has had to date on pedestrians and on pedestrian spaces.

The majority of households in the borough do not have access to a motor vehicle, in some wards this is the significant majority, therefore it is right for the council to be reviewing how space is effectively used to meet the travel needs of those who do not drive or choose not to drive short distances. At the moment the kerb space in residential areas is dominated by increasingly large motor vehicles, it is fair and proportionate that some of this space be designated for on street cycle bays.

Carriageway cycle bays:

1. Provide convenient designated locations for hire users
2. Are space efficient where they replace one car parking bay (often used by one car for most of the day) cycle bays enable greater utilisation with capacity for 6+ bikes and will have a greater turnover of use given they are hire bikes

3. Addresses many of the concerns expressed by residents and others about the impact of dockless hire bikes on pavements and impact on pedestrians
4. Improve pedestrian experience and safety
5. Improve the safety for hire users using the carriageway at present for parking
6. Reduce conflict between pedestrians and cyclists (negating need to mount pavement to park bikes)
7. Alleviate the increasing instances where bikes are parked between cars or in carriage way by providing designated fit for purpose infrastructure
8. Will promote sustainable travel in the borough, convenience is a key enabler for increased active travel
9. Proven to be effective as carriageway bays already implemented by other London authorities e.g. City of London

A map of proposed locations would have been helpful to provide an easy view of coverage for proposed locations, some comments:

1. There should be extra provision for bays outside or near tube stations or busy connection points, often cycle hire is part of a multi-modal journey and providing convenient connection with public transport is important. It is also outside tube stations where dockless bikes are often left by companies and users in significant volumes, this causes significant pavement congestion.
2. Bays should also be conveniently located near schools, GP's, hospitals and other such places to enable greater short local journeys to be made by bike than driving
3. It should be the aim to have such bays on every road with a maximum walking distance to ensure cycle hire provision is convenient for everyone across the borough, user compliance will also increase if bays are easy to find and are visible
4. It would be good for bays to have residential cycle parking facilities adjacent with planting to improve kerbside space
5. The bays should have planting or bollards to clearly designate bays for cycle parking and provide protection for cycles parked in the bays and avoid vehicles encroaching, parking or stopping in such bays

BS4KC continues to raise the need for the council to provide safe cycle routes along main roads East-West and North-South road corridors, this is especially needed as the popularity of such hire schemes increases and more people choose to cycle.

We therefore fully support all the proposed locations listed in the consultation and do not consider any objections based on the concerns around car parking provision should impede the approval of any of these locations, the benefits significantly outweigh any perceived inconvenience to a small number of drivers who may need to find alternative car parking on occasions. Such concerns are mitigated by the sheer number of options open to car drivers at present through the generous resident permit scheme, PAYG bays and car parks located across the borough.

Support in Full Two

I am submitting this consultation response in a personal capacity.

This response covers all the proposed locations for rental bike bays.

I fully support the proposals brought by RBKC to introduce dockless cycle hire bays in the carriageway across the borough for the following reasons;

1. Provide convenient designated locations for hire users
2. Are space efficient where they replace one car parking bay (often used by one car for most of the day) cycle bays enable greater utilisation with capacity for 6+ bikes and will have a greater turnover of use given they are hire bikes
3. Addresses many of the concerns expressed by residents and others about the impact of dockless hire bikes on pavements and impact on pedestrians
4. Improve pedestrian experience and safety
5. Improve the safety for hire users using the carriageway at present for parking
6. Reduce conflict between pedestrians and cyclists (negating need to mount pavement to park bikes)
7. Alleviate the increasing instances where bikes are parked between cars or in carriage way by providing designated fit for purpose infrastructure
8. Will promote sustainable travel in the borough, convenience is a key enabler for increased active travel
9. Proven to be effective as carriageway bays already implemented by other London authorities e.g. City of London

Support in Full Three

I support ANY location for ebike parking spaces. These bikes just tossed around all over the place are the bane of our lives and a serious hazard for wheelchair users, pushchairs and just pedestrians as a whole

Support in Full Four

[No comment provided]

Support in Full Five

I think it is better to have designated spaces to leave these bikes rather than to have them littered all over the pavement causing pinch-points and trip/fall hazards. The City of London as done similar for quite a while and the bikes are much tidier yet still readily

available so this proposal works. Collaboration with the bike providers whereby GPS is used to charge people who leave them other than in designated areas incentivises compliance.

This is a general comment which applies to all of the proposed sites, but your consultation document insists on appending comments to one particular site. This has been appended to the site nearest to where I live but applies to all.

Support in Full Six

I support the installation of on street bike parking spaces in all the places proposed. The use of cars in RBKC should be reduced in any case.

Appendix 2: Responses received for proposed e-bike Bay in Bracewell Road

Support in Part One

These comments apply to all the parking bays being converted to e-bike parking spaces.

How will the new e-bike bays stop people leaving bikes anywhere on the pavement as they do now? What penalty will there be for people who continue to leave them on the pavement and how will it be levied? Shouldn't the hire companies be made responsible to go round and collect the bikes, as they know where they are?

People may use the e-bikes for short journeys, I can't imagine people giving up their cars to use e-bikes. The loss of so many parking spaces will put even more strain on those that remain. People pay for their Residents' Permits and, already, more permits are sold than there are available spaces, so this proposal is not fair to them.

In summary, those who leave their bikes where they get off them won't change their habits. Residents will be forced to struggle even more for parking, and the Council will continue to collect revenue from permits and fines from people who feel forced to park in empty or under-used e-bike bays.

I am submitting this consultation response in a personal capacity.

This response covers all the proposed locations for rental bike bays.

I fully support the proposals brought by RBKC to introduce dockless cycle hire bays in the carriageway across the borough for the following reasons;

1. Provide convenient designated locations for hire users
2. Are space efficient where they replace one car parking bay (often used by one car for most of the day) cycle bays enable greater utilisation with capacity for 6+ bikes and will have a greater turnover of use given they are hire bikes
3. Addresses many of the concerns expressed by residents and others about the impact of dockless hire bikes on pavements and impact on pedestrians
4. Improve pedestrian experience and safety
5. Improve the safety for hire users using the carriageway at present for parking
6. Reduce conflict between pedestrians and cyclists (negating need to mount pavement to park bikes)
7. Alleviate the increasing instances where bikes are parked between cars or in carriage way by providing designated fit for purpose infrastructure
8. Will promote sustainable travel in the borough, convenience is a key enabler for increased active travel
9. Proven to be effective as carriageway bays already implemented by other London authorities e.g. City of London

Support in Full Three

I support ANY location for ebike parking spaces. These bikes just tossed around all over the place are the bane of our lives and a serious hazard for wheelchair users, pushchairs and just pedestrians as a whole

Support in Full Four

It is now very important to provide official places to park e-bikes and not allow them to be parked at random on pavements.

I live beside a block of flats. E-bikes are popular with the residents. Three or four bikes are frequently parked at different places along the middle the pavement.

Support in Full Five

I think it is better to have designated spaces to leave these bikes rather than to have them littered all over the pavement causing pinch-points and trip/fall hazards. The City of London as done similar for quite a while and the bikes are much tidier yet still readily available so this proposal works. Collaboration with the bike providers whereby GPS is used to charge people who leave them other than in designated areas incentivises compliance.

This is a general comment which applies to all of the proposed sites, but your consultation document insists on appending comments to one particular site. This has been appended to the site nearest to where I live but applies to all.

Support in Full Six

I support the installation of on street bike parking spaces in all the places proposed. The use of cars in RBKC should be reduced in any case.

Appendix 4: Responses received for proposed e-bike Bay in Pangbourne Avenue

Objection One

Pangbourne Avenue seems to have a lot of cars parked in the residents' parking spaces so that often those who live in Pangbourne Avenue have difficulty parking here. One less space will make quite a difference, particularly if e-bikes are not being parked there. With a pre-school nursery and a large development on one side of the street there are always plenty of cars parked here.

Objection Two

the council is continuing the war against the motorist. I find public transport difficult to use. especially for shopping as I am 77 years old. Also public transport does not go where I wish to go. I need my car for many reasons and taking away residents parking is an insult. bicycle users behave appallingly badly and do not obey the rules and pay nothing towards the maintenance of the roads. three times I have nearly been knocked over when coming out of my house by bicyclists pounding down the pavement. They never put the bikes back in the cycle racks but leave them obstructing footpaths and roads.

Support in Part One

These comments apply to all the parking bays being converted to e-bike parking spaces.

How will the new e-bike bays stop people leaving bikes anywhere on the pavement as they do now? What penalty will there be for people who continue to leave them on the pavement and how will it be levied? Shouldn't the hire companies be made responsible to go round and collect the bikes, as they know where they are?

People may use the e-bikes for short journeys, I can't imagine people giving up their cars to use e-bikes. The loss of so many parking spaces will put even more strain on those that remain. People pay for their Residents' Permits and, already, more permits are sold than there are available spaces, so this proposal is not fair to them.

In summary, those who leave their bikes where they get off them won't change their habits. Residents will be forced to struggle even more for parking, and the Council will continue to collect revenue from permits and fines from people who feel forced to park in empty or under-used e-bike bays.

Rather than apply this scheme wholesale and risk a potentially expensive disaster, please trial it in a couple of areas first to see whether it actually works.

Support in Full One (Better Streets for Kensington and Chelsea)

I am submitting this consultation response on behalf of Better Streets for Kensington and Chelsea (BS4KC), an organisation made up of RBKC residents also representing the views of people studying or working in the borough.

This response covers all the proposed locations for rental bike bays.

BS4KC welcomes and fully supports the proposals brought by RBKC to introduce dockless cycle hire bays in the carriageway across the borough. Dockless cycle hire bikes are providing convenient and sustainable travel options for many RBKC residents as well as those studying, working or visiting the borough. Their popularity is very much evident when walking down any street in the borough and these proposals rightly address some of the unintended consequences of dockless hire bike schemes. As such the proposals fully align with the RBKC plan of being a greener, safer and fairer borough;

1. Supporting and enabling greater use of dockless hire bikes as replacement for short car journeys is sustainable, improves local air quality and supports improving health and wellbeing
2. Providing dedicated parking bays off the pavement improves the safety for pedestrians and for those hiring bikes as they will have designated spaces
3. In a borough where the majority of households do not have access to a motor vehicle, meeting the needs of those wishing to not travel by car and repurposing some kerb space dominated by parked cars is fairer and goes towards meeting the needs of more RBKC residents and visitors

With the introduction of any new service there is a need to provide suitable infrastructure. It is recognised that dockless cycle hire bikes have in most places no designated parking provision therefore users usually leave them where their ride ends. Some make efforts to park the bike without causing obstruction however in most cases users do park the bikes on pavements (as do the hire companies in some cases). This invariably causes obstruction to pedestrians and impacts most on those who have mobility issues. On busy streets it causes pedestrian congestion with so much space taken up by cycle hire bikes (and other pavement clutter). Increasingly hire bike users are attempting to not cause obstructions on the pavement however there is no designated infrastructure for them so even the most well meaning users who leave the bikes between parked cars or in the carriageway also end up causing unintended inconveniences and risks. Designated cycle hire bays would address the vast majority of current issues associated with dockless hire bike schemes.

The proposals to create designated cycle hire bays on the carriageway are wholly appropriate to meet the needs of those wanting to make use of sustainable and healthy travel choices while managing the impact this has had to date on pedestrians and on pedestrian spaces.

The majority of households in the borough do not have access to a motor vehicle, in some wards this is the significant majority, therefore it is right for the council to be reviewing how space is effectively used to meet the travel needs of those who do not drive or choose not to drive short distances. At the moment the kerb space in residential areas is dominated by increasingly large motor vehicles, it is fair and proportionate that some of this space be designated for on street cycle bays.

Carriageway cycle bays:

1. Provide convenient designated locations for hire users
2. Are space efficient where they replace one car parking bay (often used by one car for most of the day) cycle bays enable greater utilisation with capacity for 6+ bikes and will have a greater turnover of use given they are hire bikes
3. Addresses many of the concerns expressed by residents and others about the impact of dockless hire bikes on pavements and impact on pedestrians
4. Improve pedestrian experience and safety
5. Improve the safety for hire users using the carriageway at present for parking
6. Reduce conflict between pedestrians and cyclists (negating need to mount pavement to park bikes)
7. Alleviate the increasing instances where bikes are parked between cars or in carriage way by providing designated fit for purpose infrastructure
8. Will promote sustainable travel in the borough, convenience is a key enabler for increased active travel
9. Proven to be effective as carriageway bays already implemented by other London authorities e.g. City of London

A map of proposed locations would have been helpful to provide an easy view of coverage for proposed locations, some comments:

1. There should be extra provision for bays outside or near tube stations or busy connection points, often cycle hire is part of a multi-modal journey and providing convenient connection with public transport is important. It is also outside tube stations where dockless bikes are often left by companies and users in significant volumes, this causes significant pavement congestion.
2. Bays should also be conveniently located near schools, GP's, hospitals and other such places to enable greater short local journeys to be made by bike than driving
3. It should be the aim to have such bays on every road with a maximum walking distance to ensure cycle hire provision is convenient for everyone across the borough, user compliance will also increase if bays are easy to find and are visible
4. It would be good for bays to have residential cycle parking facilities adjacent with planting to improve kerbside space

5. The bays should have planting or bollards to clearly designate bays for cycle parking and provide protection for cycles parked in the bays and avoid vehicles encroaching, parking or stopping in such bays

BS4KC continues to raise the need for the council to provide safe cycle routes along main roads East-West and North-South road corridors, this is especially needed as the popularity of such hire schemes increases and more people choose to cycle.

We therefore fully support all the proposed locations listed in the consultation and do not consider any objections based on the concerns around car parking provision should impede the approval of any of these locations, the benefits significantly outweigh any perceived inconvenience to a small number of drivers who may need to find alternative car parking on occasions. Such concerns are mitigated by the sheer number of options open to car drivers at present through the generous resident permit scheme, PAYG bays and car parks located across the borough.

Support in Full Two

I am submitting this consultation response in a personal capacity.

This response covers all the proposed locations for rental bike bays.

I fully support the proposals brought by RBKC to introduce dockless cycle hire bays in the carriageway across the borough for the following reasons;

1. Provide convenient designated locations for hire users
2. Are space efficient where they replace one car parking bay (often used by one car for most of the day) cycle bays enable greater utilisation with capacity for 6+ bikes and will have a greater turnover of use given they are hire bikes

Support in Full Five

I support the installation of on street bike parking spaces in all the places proposed. The use of cars in RBKC should be reduced in any case.

Appendix 6: Responses received for proposed e-bike Bay in St Mark's Road

Objection One

I am writing on behalf of and represent a group of residents living permanently at the northern end of St. Mark's Road W10 to respond to the proposal of the following Rental e-Bike Parking Bay:

"cxxxvi. on the west side of St Mark's Road outside the flank wall of No. 110 Barlby Road, situated in St Mark's Road."

We applaud and welcome the endeavour to encourage alternative public transport but oppose the measure on the following grounds:

1. Most residents would be directly affected because the bay would unfairly and further limit the number of resident parking spaces which is currently insufficient.
2. Elderly and disabled residents holding RBKC Blue and Purple disabled parking badges, including a survivor of an aggressive cancer and those with young children and grandchildren would find it most difficult to park within walking distance of their homes causing unnecessary obstruction and inconvenience.
3. It will place undue pressure on the east side of St. Mark's Road where resident parking bays are scarce.
4. It would increase existing antisocial behaviour, noise nuisance and litter by inebriated and/or young people who use public bicycles as a popular method of travel/transport.
5. It will negatively affect the value and attractiveness to buyers of property on the road.
6. There are alternative areas away from residents to place an e-Bike Rental Parking Bay.
7. It would cause a safety hazard to e-cyclists and other road users close to a busy but diminutive roundabout used by a regular bus service which uses the entire diameter of the rotary to turn into and out of the northern extreme of St. Mark's Road.

With respect, we will therefore vehemently object to this proposal to the conclusion of any due process.

[Additional Comments]

None of us have either received a reply or acknowledgement to the emailed objection below dated 19/4/23 which we received a receipt for.

The yellow sign on the lamp post, which I photographed, stated we have until 17th May to object.

However it has been taken down prematurely and temporary road markings have been drawn for the proposed bay.

What is going on?

[Additional Comments]

I received some of your details from the attached photograph.

My neighbours and I object to the proposed e-Bike parking bay at the north west end of St. Mark's Road W10.

Please read the correspondence below with priority as it is time sensitive and includes our grounds.

We have yet to be consulted or receive a reply or acknowledgment.

We had until 17th May to object but the yellow sign in the photo has already been removed and temporary road markings have been drawn.

Reference: Dockless Bikes/NS/S453f

[Additional Comments]

It is 16th May today. The street notice has not been replaced and the attached sign has been put up. If the sign is not related to this proposal, what is it for?

[Additional Comments]

Support in Part One

These comments apply to all the parking bays being converted to e-bike parking spaces.

How will the new e-bike bays stop people leaving bikes anywhere on the pavement as they do now? What penalty will there be for people who continue to leave them on the pavement and how will it be levied? Shouldn't the hire companies be made responsible to go round and collect the bikes, as they know where they are?

People may use the e-bikes for short journeys, I can't imagine people giving up their cars to use e-bikes. The loss of so many parking spaces will put even more strain on those that remain. People pay for their Residents' Permits and, already, more permits are sold than there are available spaces, so this proposal is not fair to them.

In summary, those who leave their bikes where they get off them won't change their habits. Residents will be forced to struggle even more for parking, and the Council will continue to collect revenue from permits and fines from people who feel forced to park in empty or under-used e-bike bays.

Rather than apply this scheme wholesale and risk a potentially expensive disaster, please trial it in a couple of areas first to see whether it actually works.

Support in Full One (Better Streets for Kensington and Chelsea)

I am submitting this consultation response on behalf of Better Streets for Kensington and Chelsea (BS4KC), an organisation made up of RBKC residents also representing the views of people studying or working in the borough.

This response covers all the proposed locations for rental bike bays.

BS4KC welcomes and fully supports the proposals brought by RBKC to introduce dockless cycle hire bays in the carriageway across the borough. Dockless cycle hire bikes are providing convenient and sustainable travel options for many RBKC residents as well as those studying, working or visiting the borough. Their popularity is very much evident when walking down any street in the borough and these proposals rightly address some of the unintended consequences of dockless hire bike schemes. As such the proposals fully align with the RBKC plan of being a greener, safer and fairer borough;

1. Supporting and enabling greater use of dockless hire bikes as replacement for short car journeys is sustainable, improves local air quality and supports improving health and wellbeing
2. Providing dedicated parking bays off the pavement improves the safety for pedestrians and for those hiring bikes as they will have designated spaces
3. In a borough where the majority of households do not have access to a motor vehicle, meeting the needs of those wishing to not travel by car and repurposing some kerb space dominated by parked cars is fairer and goes towards meeting the needs of more RBKC residents and visitors

With the introduction of any new service there is a need to provide suitable infrastructure. It is recognised that dockless cycle hire bikes have in most places no designated parking provision therefore users usually leave them where their ride ends. Some make efforts to park the bike without causing obstruction however in most cases users do park the bikes on pavements (as do the hire companies in some cases). This invariably causes obstruction to pedestrians and impacts most on those who have mobility issues. On busy streets it causes pedestrian congestion with so much space taken up by cycle hire bikes (and other pavement clutter). Increasingly hire bike users are attempting to not cause obstructions on the pavement however there is no designated infrastructure for them so even the most well meaning users who leave the bikes between parked cars or in the carriageway also end up causing unintended inconveniences and risks. Designated cycle hire bays would address the vast majority of current issues associated with dockless hire bike schemes.

The proposals to create designated cycle hire bays on the carriageway are wholly appropriate to meet the needs of those wanting to make use of sustainable and healthy travel choices while managing the impact this has had to date on pedestrians and on pedestrian spaces.

The majority of households in the borough do not have access to a motor vehicle, in some wards this is the significant majority, therefore it is right for the council to be reviewing how space is effectively used to meet the travel needs of those who do not drive or choose not to drive short distances. At the moment the kerb space in residential areas is dominated by increasingly large motor vehicles, it is fair and proportionate that some of this space be designated for on street cycle bays.

Carriageway cycle bays:

1. Provide convenient designated locations for hire users
2. Are space efficient where they replace one car parking bay (often used by one car for most of the day) cycle bays enable greater utilisation with capacity for 6+ bikes and will have a greater turnover of use given they are hire bikes

3. Addresses many of the concerns expressed by residents and others about the impact of dockless hire bikes on pavements and impact on pedestrians
4. Improve pedestrian experience and safety
5. Improve the safety for hire users using the carriageway at present for parking
6. Reduce conflict between pedestrians and cyclists (negating need to mount pavement to park bikes)
7. Alleviate the increasing instances where bikes are parked between cars or in carriage way by providing designated fit for purpose infrastructure
8. Will promote sustainable travel in the borough, convenience is a key enabler for increased active travel
9. Proven to be effective as carriageway bays already implemented by other London authorities e.g. City of London

A map of proposed locations would have been helpful to provide an easy view of coverage for proposed locations, some comments:

1. There should be extra provision for bays outside or near tube stations or busy connection points, often cycle hire is part of a multi-modal journey and providing convenient connection with public transport is important. It is also outside tube stations where dockless bikes are often left by companies and users in significant volumes, this causes significant pavement congestion.
2. Bays should also be conveniently located near schools, GP's, hospitals and other such places to enable greater short local journeys to be made by bike than driving
3. It should be the aim to have such bays on every road with a maximum walking distance to ensure cycle hire provision is convenient for everyone across the borough, user compliance will also increase if bays are easy to find and are visible
4. It would be good for bays to have residential cycle parking facilities adjacent with planting to improve kerbside space
5. The bays should have planting or bollards to clearly designate bays for cycle parking and provide protection for cycles parked in the bays and avoid vehicles encroaching, parking or stopping in such bays

BS4KC continues to raise the need for the council to provide safe cycle routes along main roads East-West and North-South road corridors, this is especially needed as the popularity of such hire schemes increases and more people choose to cycle.

We therefore fully support all the proposed locations listed in the consultation and do not consider any objections based on the concerns around car parking provision should impede the approval of any of these locations, the benefits significantly outweigh any perceived inconvenience to a small number of drivers who may need to find alternative car parking on occasions. Such concerns are mitigated by the sheer number of options open to car drivers at present through the generous resident permit scheme, PAYG bays and car parks located across the borough.

Support in Full Two

I am submitting this consultation response in a personal capacity.

This response covers all the proposed locations for rental bike bays.

I fully support the proposals brought by RBKC to introduce dockless cycle hire bays in the carriageway across the borough for the following reasons;

1. Provide convenient designated locations for hire users
2. Are space efficient where they replace one car parking bay (often used by one car for most of the day) cycle bays enable greater utilisation with capacity for 6+ bikes and will have a greater turnover of use given they are hire bikes

9. Proven to be effective as carriageway bays already implemented by other London authorities e.g. City of London

Support in Full Three

I support ANY location for ebike parking spaces. These bikes just tossed around all over the place are the bane of our lives and a serious hazard for wheelchair users, pushchairs and just pedestrians as a whole

Support in Full Four

I think it is better to have designated spaces to leave these bikes rather than to have them littered all over the pavement causing pinch-points and trip/fall hazards. The City of London as done similar for quite a while and the bikes are much tidier yet still readily available so this proposal works. Collaboration with the bike providers whereby GPS is used to charge people who leave them other than in designated areas incentivises compliance.

This is a general comment which applies to all of the proposed sites, but your consultation document insists on appending comments to one particular site. This has been appended to the site nearest to where I live but applies to all.

Support in Full Five

I support the installation of on street bike parking spaces in all the places proposed. The use of cars in RBKC should be reduced in any case.

Appendix 7: Responses received for proposed e-bike Bay in Sutton Way

Support in Part One

These comments apply to all the parking bays being converted to e-bike parking spaces.

How will the new e-bike bays stop people leaving bikes anywhere on the pavement as they do now? What penalty will there be for people who continue to leave them on the pavement and how will it be levied? Shouldn't the hire companies be made responsible to go round and collect the bikes, as they know where they are?

People may use the e-bikes for short journeys, I can't imagine people giving up their cars to use e-bikes. The loss of so many parking spaces will put even more strain on those that remain. People pay for their Residents' Permits and, already, more permits are sold than there are available spaces, so this proposal is not fair to them.

In summary, those who leave their bikes where they get off them won't change their habits. Residents will be forced to struggle even more for parking, and the Council will continue to collect revenue from permits and fines from people who feel forced to park in empty or under-used e-bike bays.

Rather than apply this scheme wholesale and risk a potentially expensive disaster, please trial it in a couple of areas first to see whether it actually works.

Support in Full One (Better Streets for Kensington and Chelsea)

I am submitting this consultation response on behalf of Better Streets for Kensington and Chelsea (BS4KC), an organisation made up of RBKC residents also representing the views of people studying or working in the borough.

This response covers all the proposed locations for rental bike bays.

BS4KC welcomes and fully supports the proposals brought by RBKC to introduce dockless cycle hire bays in the carriageway across the borough. Dockless cycle hire bikes are providing convenient and sustainable travel options for many RBKC residents as well as those studying, working or visiting the borough. Their popularity is very much evident when walking down any street in the borough and these proposals rightly address some of the unintended consequences of dockless hire bike schemes. As such the proposals fully align with the RBKC plan of being a greener, safer and fairer borough;

1. Supporting and enabling greater use of dockless hire bikes as replacement for short car journeys is sustainable, improves local air quality and supports improving health and wellbeing
2. Providing dedicated parking bays off the pavement improves the safety for pedestrians and for those hiring bikes as they will have designated spaces
3. In a borough where the majority of households do not have access to a motor vehicle, meeting the needs of those wishing to not travel by car and repurposing some kerb space dominated by parked cars is fairer and goes towards meeting the needs of more RBKC residents and visitors

With the introduction of any new service there is a need to provide suitable infrastructure. It is recognised that dockless cycle hire bikes have in most places no designated parking provision therefore users usually leave them where their ride ends. Some make efforts to park the bike without causing obstruction however in most cases users do park the bikes on pavements (as do the hire companies in some cases). This invariably causes obstruction to pedestrians and impacts most on those who have mobility issues. On busy streets it causes pedestrian congestion with so much space taken up by cycle hire bikes (and other pavement clutter). Increasingly hire bike users are attempting to not cause obstructions on the pavement however there is no designated infrastructure for them so even the most well meaning users who leave the bikes between parked cars or in the carriageway also end up causing unintended inconveniences and risks. Designated cycle hire bays would address the vast majority of current issues associated with dockless hire bike schemes.

The proposals to create designated cycle hire bays on the carriageway are wholly appropriate to meet the needs of those wanting to make use of sustainable and healthy travel choices while managing the impact this has had to date on pedestrians and on pedestrian spaces.

The majority of households in the borough do not have access to a motor vehicle, in some wards this is the significant majority, therefore it is right for the council to be reviewing how space is effectively used to meet the travel needs of those who do not drive or choose not to drive short distances. At the moment the kerb space in residential areas is dominated by increasingly large motor vehicles, it is fair and proportionate that some of this space be designated for on street cycle bays.

Carriageway cycle bays:

1. Provide convenient designated locations for hire users
2. Are space efficient where they replace one car parking bay (often used by one car for most of the day) cycle bays enable greater utilisation with capacity for 6+ bikes and will have a greater turnover of use given they are hire bikes

3. Addresses many of the concerns expressed by residents and others about the impact of dockless hire bikes on pavements and impact on pedestrians
4. Improve pedestrian experience and safety
5. Improve the safety for hire users using the carriageway at present for parking
6. Reduce conflict between pedestrians and cyclists (negating need to mount pavement to park bikes)
7. Alleviate the increasing instances where bikes are parked between cars or in carriage way by providing designated fit for purpose infrastructure
8. Will promote sustainable travel in the borough, convenience is a key enabler for increased active travel
9. Proven to be effective as carriageway bays already implemented by other London authorities e.g. City of London

A map of proposed locations would have been helpful to provide an easy view of coverage for proposed locations, some comments:

1. There should be extra provision for bays outside or near tube stations or busy connection points, often cycle hire is part of a multi-modal journey and providing convenient connection with public transport is important. It is also outside tube stations where dockless bikes are often left by companies and users in significant volumes, this causes significant pavement congestion.
2. Bays should also be conveniently located near schools, GP's, hospitals and other such places to enable greater short local journeys to be made by bike than driving
3. It should be the aim to have such bays on every road with a maximum walking distance to ensure cycle hire provision is convenient for everyone across the borough, user compliance will also increase if bays are easy to find and are visible
4. It would be good for bays to have residential cycle parking facilities adjacent with planting to improve kerbside space
5. The bays should have planting or bollards to clearly designate bays for cycle parking and provide protection for cycles parked in the bays and avoid vehicles encroaching, parking or stopping in such bays

BS4KC continues to raise the need for the council to provide safe cycle routes along main roads East-West and North-South road corridors, this is especially needed as the popularity of such hire schemes increases and more people choose to cycle.

We therefore fully support all the proposed locations listed in the consultation and do not consider any objections based on the concerns around car parking provision should impede the approval of any of these locations, the benefits significantly outweigh any perceived inconvenience to a small number of drivers who may need to find alternative car parking on occasions. Such concerns are mitigated by the sheer number of options open to car drivers at present through the generous resident permit scheme, PAYG bays and car parks located across the borough.

Support in Full Two

I am submitting this consultation response in a personal capacity.

This response covers all the proposed locations for rental bike bays.

I fully support the proposals brought by RBKC to introduce dockless cycle hire bays in the carriageway across the borough for the following reasons;

1. Provide convenient designated locations for hire users
2. Are space efficient where they replace one car parking bay (often used by one car for most of the day) cycle bays enable greater utilisation with capacity for 6+ bikes and will have a greater turnover of use given they are hire bikes
3. Addresses many of the concerns expressed by residents and others about the impact of dockless hire bikes on pavements and impact on pedestrians
4. Improve pedestrian experience and safety
5. Improve the safety for hire users using the carriageway at present for parking
6. Reduce conflict between pedestrians and cyclists (negating need to mount pavement to park bikes)
7. Alleviate the increasing instances where bikes are parked between cars or in carriage way by providing designated fit for purpose infrastructure
8. Will promote sustainable travel in the borough, convenience is a key enabler for increased active travel
9. Proven to be effective as carriageway bays already implemented by other London authorities e.g. City of London

Support in Full Three

I support ANY location for ebike parking spaces. These bikes just tossed around all over the place are the bane of our lives and a serious hazard for wheelchair users, pushchairs and just pedestrians as a whole

Support in Full Four

I think it is better to have designated spaces to leave these bikes rather than to have them littered all over the pavement causing pinch-points and trip/fall hazards. The City of London as done similar for quite a while and the bikes are much tidier yet still readily available so this proposal works. Collaboration with the bike providers whereby GPS is used to charge people who leave them other than in designated areas incentivises compliance.

This is a general comment which applies to all of the proposed sites, but your consultation document insists on appending comments to one particular site. This has been appended to the site nearest to where I live but applies to all.

Support in Full Five

I support the installation of on street bike parking spaces in all the places proposed. The use of cars in RBKC should be reduced in any case.

Appendix 8: Responses received for proposed e-bike Bay in Sutton Way

Objection One

Too many in the north of the ward

Why aren't they spread out?

This one by the park will be an eyesore and dangerous for the young and old who use the park

Support in Part One

These comments apply to all the parking bays being converted to e-bike parking spaces.

How will the new e-bike bays stop people leaving bikes anywhere on the pavement as they do now? What penalty will there be for people who continue to leave them on the pavement and how will it be levied? Shouldn't the hire companies be made responsible to go round and collect the bikes, as they know where they are?

People may use the e-bikes for short journeys, I can't imagine people giving up their cars to use e-bikes. The loss of so many parking spaces will put even more strain on those that remain. People pay for their Residents' Permits and, already, more permits are sold than there are available spaces, so this proposal is not fair to them.

In summary, those who leave their bikes where they get off them won't change their habits. Residents will be forced to struggle even more for parking, and the Council will continue to collect revenue from permits and fines from people who feel forced to park in empty or under-used e-bike bays.

Rather than apply this scheme wholesale and risk a potentially expensive disaster, please trial it in a couple of areas first to see whether it actually works.

Support in Full One (Better Streets for Kensington and Chelsea)

I am submitting this consultation response on behalf of Better Streets for Kensington and Chelsea (BS4KC), an organisation made up of RBKC residents also representing the views of people studying or working in the borough.

This response covers all the proposed locations for rental bike bays.

BS4KC welcomes and fully supports the proposals brought by RBKC to introduce dockless cycle hire bays in the carriageway across the borough. Dockless cycle hire bikes are providing convenient and sustainable travel options for many RBKC residents as well as those studying, working or visiting the borough. Their popularity is very much evident when walking down any street in the borough and these proposals rightly address some of the unintended consequences of dockless hire bike schemes. As such the proposals fully align with the RBKC plan of being a greener, safer and fairer borough;

1. Supporting and enabling greater use of dockless hire bikes as replacement for short car journeys is sustainable, improves local air quality and supports improving health and wellbeing
2. Providing dedicated parking bays off the pavement improves the safety for pedestrians and for those hiring bikes as they will have designated spaces
3. In a borough where the majority of households do not have access to a motor vehicle, meeting the needs of those wishing to not travel by car and repurposing some kerb space dominated by parked cars is fairer and goes towards meeting the needs of more RBKC residents and visitors

With the introduction of any new service there is a need to provide suitable infrastructure. It is recognised that dockless cycle hire bikes have in most places no designated parking provision therefore users usually leave them where their ride ends. Some make efforts to park the bike without causing obstruction however in most cases users do park the bikes on pavements (as do the hire companies in some cases). This invariably causes obstruction to pedestrians and impacts most on those who have mobility issues. On busy streets it causes pedestrian congestion with so much space taken up by cycle hire bikes (and other pavement clutter). Increasingly hire bike users are attempting to not cause obstructions on the pavement however there is no designated infrastructure for them so even the most well meaning users who leave the bikes between parked cars or in the carriageway also end up causing unintended inconveniences and risks. Designated cycle hire bays would address the vast majority of current issues associated with dockless hire bike schemes.

The proposals to create designated cycle hire bays on the carriageway are wholly appropriate to meet the needs of those wanting to make use of sustainable and healthy travel choices while managing the impact this has had to date on pedestrians and on pedestrian spaces.

The majority of households in the borough do not have access to a motor vehicle, in some wards this is the significant majority, therefore it is right for the council to be reviewing how space is effectively used to meet the travel needs of those who do not drive or choose not to drive short distances. At the moment the kerb space in residential areas is dominated by increasingly large motor vehicles, it is fair and proportionate that some of this space be designated for on street cycle bays.

Carriageway cycle bays:
